FM Ribbon Antenna Slim Jim

for any Hi-Fi...Radio

88 to 108 MHz 75 Ohm

Perfect Antenna for weak signal

Plug and play
FM on steroids.
Improve your FM signal
by **300%**

R 440.00

The most common problems with radio reception are **weak signals**. Changing weather patterns can also cause problems with radio reception.

The **radio antenna** is the most important factor in achieving good reception. Many radio reception difficulties are caused by deficiencies in the radio or antenna installation. Good radio - FM - reception is dependent on signal strength and the type of radio receiver and **Antenna** used by the listener. Reception quality changes significantly between small portable radios and high fidelity tuner and speaker systems and good quality antenna systems.

But do not fear there is a solution to a problem. **Fm Ribbon Antenna (Slim Jim) 75 Ohm** supplied by us will be able to eliminate any problems that you might have with FM reception.

Very easy to use and there is no installation required just Plug and Play!

NB !!!

In order to get maximum signal out of FM Antenna try placing Antenna in different positions (preferably Vertical hanging by the hook)as the signal conditions will vary from place to place.And yes You can extend the antenna by using 75 ohm (TV Coax) .
